SUMMARY

Computer Science major specializing in Artificial Intelligence and Machine Learning, with hands-on experience building end-to-end ML solutions using frameworks such as TensorFlow, PyTorch, and Scikit-Learn. Proficient in Python, full-stack web development, and MLOps pipeline design. Led real-world projects including traffic density prediction and nutritional data analysis.

EDUCATION

B Tech Computer Science and Engineering

Vellore Institute of Technology, Bhopal

Specialization.: Artificial Intelligence and Machine Learning

Graduating July 2027

8.63 CGPA

TECHNICAL SKILLS

Programming Languages: Python, C/C++, JAVA, JavaScript

Machine Learning Frameworks: Scikit-Learn, Open CV, Keras, Pytorch, Tensorflow

Web Frameworks: Reactjs, Nodejs, Flutter, Flask

Databases: MySQL, MongoDB, NoSQL

EXPERIENCE

AMASQIS.AI, India & Oman: AI & Backend Intern

March 2025 – Sept 2025

- Deployed two MLOps pipelines for real-time prediction and anomaly detection using Node.js and Python
- Deployed scalable backend infrastructure on cloud platforms, ensuring seamless integration with machine learning workflows

ACADEMIC PROJECTS

NutriScanner

Winter 2024

Team Project – Mobile Application for Nutritional Score Prediction

- Compared and evaluated 4+ machine learning algorithms to optimize nutritional score predictions for packaged food items
- Incorporated allergy profiles and medical conditions to deliver personalized nutrition assessments
- Authored a technical paper comparing model performance and outlining insights for future improvements

Traffic Density Predictor

Fall 2024

Team Lead – Web Application for Predicting Area-Specific Traffic Trends

- Led a team of five in developing a web app to forecast traffic density at specific times and locations
- Collected and parsed large-scale traffic datasets using custom Python web scrapers
- Designed and implemented a neural network-based regression model for accurate traffic prediction

OTHER PROJECTS

Vadya AI Chatbot

Summer 2025

Team Project – Agent-Based Conversational AI Prototype.

- Engineered the core Text-to-Speech (TTS) engine and Voice Activity Detection system with voice interruption handling
- Designed a functional API-based proof-of-principle (PoP) model in a two-person subteam within two weeks

FacePrep Food Delivery Web App

Summer 2025

Individual Project – Built as part of Faceprep Full Stack Program.

- Implemented multi-level role-based access control with user, manager, and admin/owner permission tiers
- Developed the full backend in Node.js, including dynamic restaurant menu management and real-time updates

CERTIFICATION

- FacePrep Full Stack Development Program
- NPTEL Cloud Computing 2025
